

CULTURALLY CORRECT ORDERING OF KEYED RECORDS

ABSTRACT OF THE DISCLOSURE

The invention relates to culturally sensitive sorting of records. The invention provides a method and a computer system for sorting a set of keyed records based on a preferred locale specification having collation information of a culture. The method is performed on a computer system operatively coupled to a computer readable memory storing the set of keyed records. The steps include reading a locale token associated with the set of records, the locale token identifying a preferred locale object having collation information, using the preferred locale object to locate and read the collation information, creating a culturally correct collation key for each data key associated with the each record, and using the created culturally correct collation keys to sort the set of records into a culturally correct sorted order.
